Respected Sir / Madam,

I've been doing on offline **Java Full Stack Development** training program at Palle Technologies in Bangalore. As a trainee, I have honed my logical thinking and creative design skills through hands-on experience in both frontend and backend development. I leverage a strong foundation in **Object Oriented Programming concepts in Java, JavaScript, MySQL, HTML and CSS**, and possess foundational knowledge of React JS and few more.

I'm a B.E Computer Science graduate equipped with determination and passion for design, writing this to express my interest in applying for the Web Development/Front-end Development role in your company.

I did some front-end projects, posted them on [LinkedIn](#), and hosted them on [GitHub](#). Some of them are listed below,

- **Personal Portfolio website.**
- **E-Commerce website**
- **Netflix Clone website**

I'm working on enhancing my skills in framework and backend technologies.

With a passion for learning and quality-focused mindset, I can bring value and a better approach to projects and ideas with my skills. I am eager to get an opportunity to apply my interest and knowledge to contribute effectively to your company.

Thank you for your valuable time and consideration. I would be grateful if you could provide an update on the status of my application or any additional information you may require from my end.

Yours Sincerely,
Gopi S.
